

CASE STUDY

Community Home Care x Madison Ave Consulting

HHAx Integration for Broadway
Home Care

Community Home Care operates Broadway Home Care, serving patients and caregivers across the tri-state area. Their Salesforce and HHA eXchange environments needed to work as one connected system.

THE CHALLENGE

Two systems. Duplicate data entry. Slow decisions.

Clinical Source of Truth

HHA eXchange owned all clinical and payroll operations data.

Salesforce for Growth

Salesforce powered care coordination and business development.

Manual Re-entry

Coordinators spent hours duplicating patient and caregiver data by hand.

Stale Reporting

Census and utilization reports were always a day behind reality.

THE SOLUTION

Bi-directional HHAX + Salesforce Integration

Madison Ave Consulting built a two-way real-time integration between HHA eXchange and Salesforce for Community Home Care.

One-Click Profiles

Create Patient Profiles, Caregiver Profiles, and Admissions directly from Salesforce.

Automatic Sync

Updated information pulls from HHA eXchange back into Salesforce automatically.

Real-Time Data Flow

Stale records eliminated. Every coordinator sees live, accurate data.

On-Demand Reporting

Robust census and utilization reporting available the moment it is needed.

WHY IT MATTERS

Real-time clinical data drives real-time care decisions.

When coordinators can see accurate patient and caregiver data the moment they need it, they make better decisions.

Better decisions

Lead to better care.

Better care

Leads to better outcomes for every patient and caregiver.
