

PARTNERSHIP

WFUNA x Madison Ave Consulting

A UN-adjacent platform for
global engagement

WFUNA, the World Federation of United Nations Associations, connects member UN associations across the world. Their mission demands a platform that can handle global engagement at scale.

THE CHALLENGE

Global nonprofit operations on Salesforce

Scattered Members

Member associations spread across dozens of countries with no unified view.

Program Complexity

Program management for initiatives including WIMUN required structured oversight.

Fragmented Data

Contact and event data spread across tools and geographies with no single source of truth.

Reporting Gaps

Structured reporting across a global network was inconsistent and manual.

THE SOLUTION

Salesforce program management + user setup

Madison Ave Consulting delivered a Salesforce environment that centralized WFUNA's global engagement.

Program Structure

Program management architecture for initiatives like WIMUN, built for scale.

Member Tracking

Member association tracking across geographies in a single unified platform.

Data Consolidation

Contact data consolidated from UN-adjacent events into one clean record system.

Access Model

User access model designed for a distributed global team with role-based controls.

WHY IT MATTERS

Mission-driven work needs mission-grade tools

When a global nonprofit can see every member, every program, and every engagement in one place, the mission accelerates. That is the outcome we build for.
