

CASE STUDY

Bluecrest Recovery × Madison Ave Consulting

Health Cloud + ZenChart EMR

Bluecrest Recovery Center, part of Keystone Recovery, is a behavioral health provider focused on long-term recovery outcomes. Their clinical operations run on ZenChart. Their growth and coordination run on Salesforce. Both had to talk to each other.

The background features a stylized, blue-toned illustration of a doctor's face in profile, looking towards the left. The doctor has a concerned or intense expression. Surrounding the face are various medical and office-related items: a laptop screen on the left, a stethoscope, a pen, and some papers or charts at the bottom. The overall aesthetic is professional and clinical, with a focus on the challenges of data integration in healthcare.

THE CHALLENGE

Clinical data trapped outside the CRM

Siloed Source of Truth

ZenChart held all clinical records. Salesforce had no visibility into patient status or care history.

Disconnected Operations

Salesforce managed intake, care coordination, and alumni engagement in isolation from clinical data.

Blind Spot at the Point of Care

Coordinators needed clinical context to make real-time decisions. They did not have it.

Workflows Built for the Wrong Industry

Generic Salesforce did not capture the nuance of behavioral health workflows.

THE SOLUTION

Health Cloud implementation + ZenChart integration

Madison Ave Consulting delivered a full Salesforce Health Cloud implementation tied directly to ZenChart.

Health Cloud Records

Patient records with full care team coordination built in.

Custom Workflows

Behavioral health intake and engagement flows designed for recovery operations.

Bi-Directional Integration

Real-time clinical data flowing between ZenChart and Salesforce.

Leadership Dashboards

Reports and dashboards giving leadership full operational visibility.

WHY IT MATTERS

Clinical context enables clinical decisions

The Stakes in Recovery

When care coordinators have real-time clinical data at their fingertips, they make faster, better decisions.

For patients in active recovery, that is the difference between staying on track and falling through the cracks.

Faster decisions

Real-time data eliminates the lag between clinical events and coordinator response.

Better outcomes

Connected systems mean no patient falls through the cracks.

Madison Ave Consulting — Salesforce excellence for behavioral health.
