

CASE STUDY

Enlightened Solutions x Madison Ave Consulting

**Where clinical care
meets growth**

Enlightened Solutions is a behavioral health provider committed to peer recovery, alumni engagement, and long-term patient outcomes. Their clinical EMR and their growth platform needed to work as one.

THE CHALLENGE

Two systems. One patient.

Clinical Source of Truth

KIPU EMR held all patient records. It lived in isolation from the rest of the business.

Growth Platform Gap

Salesforce powered outreach and operations. But it never knew what KIPU knew.

Double Entry Burden

Care coordinators entered the same patient data twice. Every day. In both systems.

Delayed Decisions

Stale information meant care decisions lagged behind clinical reality. That is a risk no provider can afford.

THE SOLUTION

Full-stack Salesforce + KIPU Integration

Madison Ave Consulting delivered a complete Salesforce environment tied directly to KIPU.

Bi-Directional KIPU Sync

Real-time patient data flowing both ways. No lag. No gaps.

Salesforce Lightning

Full Lightning implementation across all operations and teams.

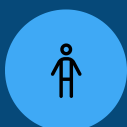

Marketing Cloud

Structured engagement for patients and alumni at every stage.

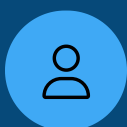

DocuSign Workflows

Intake and consent handled digitally. Fast and compliant.

CPRS Program Management

Certified Peer Recovery Specialist program built into the platform.

Alumni Engagement

Long-term outcome tracking for patients beyond active treatment.

CLIENT VOICE

What the client said

"Our care coordination team is getting information faster, leading to better decisions and better care."

Enlightened Solutions leadership

WHY IT MATTERS

In behavioral health, delay is risk.

The faster clinical data flows into the hands of care coordinators, the better the outcomes for people in active recovery. That is why we invested so heavily in integration design.

Speed is not a feature. It is a clinical imperative.
