

CASE STUDY

WFUNA x Madison Ave Consulting

**A UN-adjacent platform
for global engagement**

WFUNA, the World Federation of United Nations Associations, connects member UN associations across the world. Their mission demands a platform that can handle global engagement at scale.

THE CHALLENGE

Global nonprofit operations on Salesforce

Fragmented Geography

Member associations spread across dozens of countries with no unified view.

Program Complexity

Managing initiatives like WIMUN — World International Model UN — across regions.

Scattered Data

Contact and event data spread across tools and geographies with no single source of truth.

Reporting Gaps

No structured reporting framework to surface insights across a global network.

THE SOLUTION

Salesforce program management + user setup

Madison Ave Consulting delivered a Salesforce environment that centralized WFUNA's global engagement.

Program Structure

Dedicated program management architecture for WIMUN and other global initiatives.

Member Tracking

Association records mapped across geographies for full network visibility.

Data Consolidation

Contact data unified from UN-adjacent events into a single clean environment.

Access Model

User permissions designed for a distributed global team operating across time zones.

WHY IT MATTERS

Mission-driven work needs mission-grade tools

When a global nonprofit can see every member, every program, and every engagement in one place, the mission accelerates. That is the outcome we build for.
